- Created and maintained Testrail cases for Mobile and Web applications

EDUCATION

BACHELOR OF SCIENCE, COMPUTER SCIENCE

University of Central Florida

GPA: 3.75 - Graduation Date: May 2024

PROJECTS

Cybersecurity Competition Scoreboard

Full stack, dockerized, autonomous scoreboard application consisting of: MySQL, Django / Python, React
The scoreboard utilizes Celery to schedule a series of checks (ICMP, RDP, LDAP, etc.) upon services to determine their status and uptime to assign points to a team whilst also tracking any SLA violations in the process. The entire backend operates on a RESTful API.

Knights Experimental Rocketry

An experimental rocketry club within my school where I am a member of the payloads team. I am tasked with contributing to components and algorithms (code done in C++) that allow our portion of the rocket to serve its purpose. Also required to create thorough documentation of all processes and participate in presentations for industry leaders such as NASA regularly.
